of war pyramid and pharaoh raine's savage blade scape alive sleeping with the devil sheer knowledge a tale of three women troy and iliad world exclusive Q: How can I find out how many users are online in vb.net? I am wondering how I can find out how many users are online at any given time in vb.net? I just need to count the number of users at any given time. A: Try this:

```
Private Sub Timer1_Tick(ByVal sender As System.Object, ByVal e As System.EventArgs) Handles Timer1.Tick Dim onlineCount As Integer = 0 For i As Integer = 0 To 3500 Dim client As TcpClient = New TcpClient("127.0.0.1", 4444) If CType(client.Connected, Boolean) = True Then onlineCount += 1 End If Next MsgBox(onlineCount) End Sub
```

Note that this uses an external service to get the number of connected users at any given time. The reason is to not have to worry about sending requests to the server and clogging it up. It will work up to a certain threshold of users. This is a fairly simple example, so there's a decent chance you can customize it for your needs.
